WHOLE FOOD SUPPLEMENT

For Dogs - All Sizes, Ages and Breeds

So, you think you're happy with the food that your dog is eating.... that's great! But, you also want your canine companion to get **ALL of the nutrition they need**. And that's not always possible. Including a supplement will give you the knowledge that your pooch's diet is complete and balanced.

That's where The Healthy Barker's **Whole Food Supplement** can help! We've worked with renowned Pet Nutritionist Susan Lauten, to develop a healthy formula that **contains all of the necessary daily vitamins and minerals**. Our carefully prepared recipe is packed-full of **natural, whole food supplements** and **certified organic ingredients** - absolutely no synthetics included.

Did you know that conventional vitamins are synthesized from ingredients such as crude oil and coal? Taking these isolated nutrients is more like taking a drug than eating a food- the body treats them like foreign substances. That's just not good for your dog and can contribute to all sorts of health issues.

The ingredients in our Whole Food Supplement are made from concentrated whole foods. They **work in your dog's system synergistically** like "Real Food", to offer a combined effect for maximum absorption and use.

Our Whole Food Supplement makes providing your dog with a **100% complete and balanced diet** easy. Simply sprinkle our Whole Food Supplement on your dog's food as recommended, or add it to your own home-cooked dog food. Ask about our tail wagging recipes that are fast and easy to prepare... and dog-gone delicious!
